

# MIRACLE FRUIT

**D**iscovered from the African forests in the 16th century, Miracle Fruit (botanical name - *Synsepalum Dulcificum*) has a rare quality of imparting sweetness to tangy food items when consumed after a slow intake of it, thanks to the presence of the glycoprotein miraculin in it. Diabetic patients go for this fruit as a foretaste to forego artificial sweeteners from tangy drinks.

**Mother Farm:** Vizhikkathodu P.O., Kanjirappally, Kottayam Dist.
